

## AEA 300, Analog Input Module for Connecting Sensors with Current Signals

Analog input module

The analog input modules from the Systeme Helmholtz GmbH convert the analog signals from the process to the internal signal level of the programmable controllers.

This module is suitable for connection of sensors with current signals in the range up to  $\pm 20$  mA.

The signal lines are connected to the corresponding front connectors. You can identify them on the labeling strip.

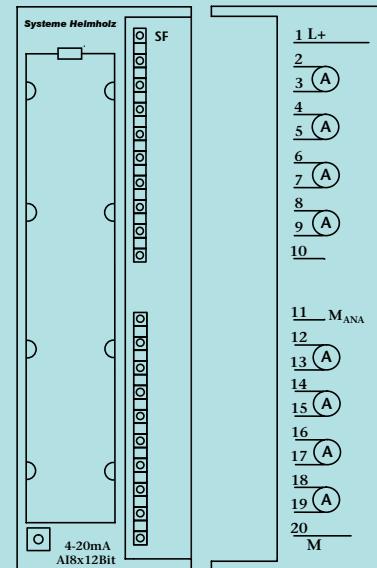

The modules can be fully parameterized with the hardware configurator of the programming software. Hardware configuration is not necessary (no range card).

### Accessory-Note

The Systeme Helmholtz GmbH supplies front connectors and cable sets (see page 34-36).

Open type Programmable Controllers, for use in Hazardous Locations, Class I, Div. 2 Groups A, B, C, D T6 including Class I Zone 2, IIC.
