DESCRIPTION

Model:	S3-AD-1	1Φ input (AVG.)
	S3-AD-3	3Φ input (AVG.)
	S3-AD-1T	1Φ input (TRMS)

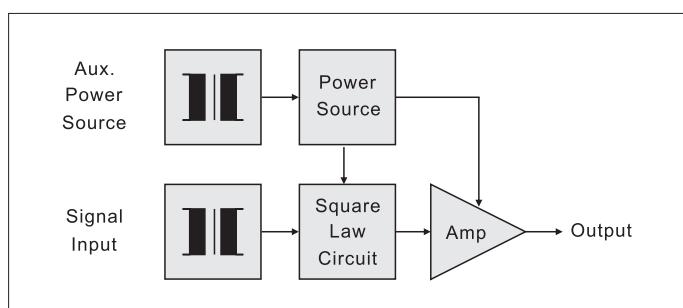

Sinusoidal Waveforms - AVG.

S3-AD Series Transducer converting a sinusoidal alternating current into a dc output, proportional to the RMS value of input. These units are average sensing, but RMS calibrated for a sine wave with less than 1% distortion. The input signal is converted to a dc voltage which then feeds to a single stage amplifier and a dc output produced.

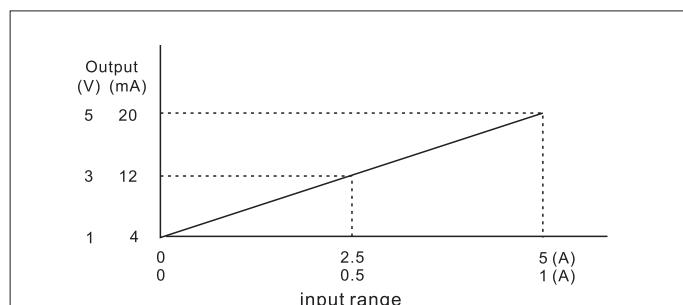

Non-Sinusoidal Waveforms - TRMS

S3-AD-1T Transducers are designed for use on waveforms with up to 30% of 3rd harmonic content. The input signal is fed to an RMS detection circuit and the resultant dc volts produced are a linear function of the RMS value of input waveform. This dc voltage is converted to a milliamp output via an output amplification circuit.
